

SURIYAN DHANAPAL

Software Engineer

Coimbatore, India • suriyandhanapal@gmail.com • +91 81100 44608 • [LinkedIn](#) • [GitHub](#)

SUMMARY

Result-driven Software Engineer with 2 years of experience crafting scalable, production-grade applications. Strong focus on writing clean, maintainable code, with hands-on experience across backend architecture, API design, and system reliability. Comfortable owning a feature end to end and contributing to reliable, on-time delivery. Passionate about continuous learning and building well-engineered, production-ready software.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python
- **Frameworks:** Node.js, Express, Next.js, React, React Native (Expo), FastAPI
- **Backend:** REST API design, OAuth 2.0, JWT auth, webhooks, MongoDB, PostgreSQL, Redis, microservices, WebSockets, WebRTC/SIP basics
- **AI:** LLM integration (OpenAI, Gemini, Vertex AI), embeddings, RAG/retrieval, speech-to-text/text-to-speech pipelines, OCR, browser automation
- **Tools:** Git, Docker, GitHub Actions, GCP, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

June 2025 - Present

Mindgryd Software Private Limited (one of 3 engineers alongside a hands-on technical founder; moved here with the founding team from HiFresh Agro)

AI Memory & Context Platform

- Built the authentication and onboarding system: OAuth 2.0 sign-in with Google, GitHub, and Microsoft plus email/password, JWT session handling, role-based access control, and automatic organization provisioning on first sign-in.
- Built the knowledge-ingestion subsystem (backend and frontend) with 8 connectors, including Google Drive, Dropbox, Notion, and SharePoint, handling per-user OAuth token storage/refresh and content normalization.
- Built a webhook delivery service with HMAC-signed payloads, at-least-once delivery via idempotency keys, and exponential-backoff retries, eliminating duplicate-processing incidents for downstream integrators.

Real-time Voice-AI Agents Platform

- Integrated 25+ STT, TTS, and LLM providers (Azure, Google, Whisper, ElevenLabs, Groq, Gemini, Vertex AI, and others) behind a unified connector interface on a third-party real-time media engine, cutting new-provider integration time from days to hours.
- Debugged provider-specific failures affecting live calls (gRPC streaming, tool-call mapping, API-key resolution) and built provider-aware test flows to catch regressions before release.

Workflow Automation Platform

- Built the Next.js frontend for configuring and managing AI agents and automated workflows, including permission controls for how much autonomy an agent has before an action requires human approval.
- Integrated Razorpay and PayPal, including checkout flows, webhook signature verification, and idempotent transaction handling, and designed the core MongoDB schemas powering the payment layer.
- Built AI agents for the platform, defining agent behavior, tool access, and decision logic to automate multi-step workflows.

Software Engineer

October 2024 - June 2025

Hifresh Agro Private Limited (same founding team; moved to Mindgryd when it was spun up)

- Built and owned an internal delivery-management mobile app (React Native / Expo) used daily by the company's delivery team end to end, extending the existing Node.js/Express backend.
- Developed APIs for delivery assignment, billing, and invoicing (Zoho Books integration) and integrated ESC/POS thermal printers for in-app receipt printing.
- Added response caching and structured logging to the Express backend's highest-traffic endpoints, eliminating redundant database queries on the app's most-used routes.

CONTRACT / PROJECT WORK

Cooper Compass, Document & Email Intelligence for Logistics

IIT Bombay-incubated startup

coopercompass.com. Node.js, Express, TypeScript, OpenAI, Google Vision OCR, Tesseract.js, OAuth 2.0 (Gmail / Microsoft Graph), PostgreSQL, Redis, Docker, GitHub Actions

- Built an email-intelligence platform that cut manual extraction of job/BL numbers from shipping emails from ~2 hours to ~8 minutes per shipment across 20+ pilot users.
- Built real-time email ingestion from Gmail and Outlook (OAuth 2.0 with Gmail Pub/Sub and Microsoft Graph push notifications), with Server-Sent Events driving live dashboard updates.
- Implemented the document-extraction pipeline: Google Vision OCR with a Tesseract.js fallback, OpenAI-based classification, and a regex validation layer for job, BL, AWB, and port fields, auto-grouping documents by shipment.
- Deployed on client infrastructure with Docker Compose and GitHub Actions CI/CD, with append-only migrations and structured logging.

EDUCATION

Bachelor of Engineering, Electronics and Communication Engineering

2019 - 2023

Dr. N.G.P. Institute of Technology
